

# SHARP 2L

**TRIMMING MACHINE FOR FLAT BROOMS AND BRUSHES UP TO 900 MM (36") IN LENGTH.**

SHARP 2L is specifically designed for the finishing of push brooms and multi-level brushes. The machine is equipped with 2 clamping stations that simultaneously carry 2 (or 4 shorter) brushes. Loading and unloading are performed manually. The workstations consist of rotary-blade trimmers, flagging units, cleaners and beaters,

available in different configurations according to the type of brush to be trimmed.

Each brush passes in correspondence of each workstation twice (once in each direction of motion), ensuring uniform trimming and high degree of finishing over the entire surface of the brush.

## TECHNICAL DATA

Clamps	2
Workstations	Depending upon the configuration
Production (brushes/hour)	180 (up to 600 mm) 160 (up to 900 mm)
Max brush length (mm)	915
Power consumption (kW)	7
Air consumption (nL/min)	100
Weight (kg)	900
Dimensions (mm)	L - 3200 W - 1500 H - 1000
